SPECIAL ELECTRICAL AND OPTICAL CABLES

Techni Kabel

INTRODUCTION

Structured cabling solutions

Tecnikabel can provide a wide range of signal transmission solutions for public and private areas. Whether building entrance or roof, data center, meeting rooms, auditoriums or conference rooms, we can build management and security system control rooms for each individual office or workstation.

Engineers daily design new powerful systems and larger cabling infrastructures, where transmission protocols need to vehicle huge amounts of data (data, signals, images, etc.) at high speed.

These fully integrated communication systems work at the highest speed and maximum stability, either through the use of optical fiber or copper cables.

Tecnikabel is able to meet the most recent Building sector requirements, with full-circuit integrity guaranteed during fire in accordance with IEC 60331 up to a superior extended time of 180 minutes.

Security & Alarm cables for Mass-Notification systems

Many current public and private buildings, such as offices, hospitals, airports, amusement parks, retail outlets, schools, stadiums and other such places, all have surveillance systems to track visitors and employees. The purpose of these systems is to protect people, the facility and its assets. These cables are designed to make installation as simple as possible, and thereby save time and money. In the event of fire, it is critically important that the electrical detection, warning and alarm systems continue to operate - even in extreme conditions - such as fire and high heat. To ensure the safety and evacuation of personnel, the fire alarm system must not fail. Many Tecnikabel cables are specifically designed for use during severe fires. In such circumstances, fire resistance, low smoke density and zero halogen emissions ensure there is no irremediable risk to either circuit or personnel.

Fire-resistant cables for fire detection and alarm systems and emergency lighting

BS 5839-1 provides recommendations for the planning, design, installation, commissioning and maintenance of fire detection and fire alarm systems for non-domestic premises. It does not cover voice alarm systems (which are separately addressed in BS 5839-8) and yet recommendations for fire detection and fire alarm systems in domestic premises are given in BS 5839-6. Cables are designed to ensure that the interconnections between fire alarm systems operate correctly for an appropriate length of time in the event of an emergency. With the terms of 'Standard' and 'Enhanced' the BS 5389-1 standard refers to two levels of cables performance, determining the level of fire resistance that the cables must offer.

For most applications BS5839-1 recommends the use of 'Standard' fire resisting cables. However, for particular applications, the standard recommends the use of 'Enhanced' fire resisting cables.

Test methods to determine the grade of a 'Standard' cable are described in EN 50200 while BS 8434-2 states tests methods to assess 'Enhanced' cables.

TECNIKABEL

is focused on constant product innovation to get competitive advantages with endless commitment to research and development.

PRODUCTION

Updated production Systems, stringent process procedures and expert operators reached the goal to carry out our production efficient and flexible.

In 30 years of activity, we produced more than 26.000 different types of cables.

FINAL INSPECTIONS

At the end of production processes each cable is checked in its electrical optical and physical performances for a complete compliance to customer specifications.

LABORATORY TESTS

We submit our cables to the most severe tests, simulating critical applications. In addition to the classic tests required by current rules, we made special equipments for different types of mechanical, environmental, electric and optical tests.

MATERIALS RESEARCH AND DEVELOPMENT

Our thirty year experience took us to carry on research of new materials in order to improve performances, costs and fulfil the standards required by our customers.

QUALITY SYSTEM

Since 1978, constant commitment to Quality has awarded Tecnikabel approval from American and European Authorities, complying with the most demanding international manufacturing and quality standards.

FIRE PERFORMANCE

FIRE PERFORMANCES

IEC 60332-1-2 / EN 50265 / BS 4066:

Fire propagation on a vertical single cable

The single cable is mounted vertically and flamed with a Bunsen burner.

The flame must extinguish itself, at least 50 mm below the upper fixing clamp.

Power of burner, duration and angle of flame application, are described in the reference standards.

IEC 60332-3 / EN 50266:

Fire propagation on a vertical cables bundle

A certain number of cable samples are fixed on a 3.5m long ladder, and flamed with an appropriate burner.

The sample number, the duration of flame application, and the power/temperature of burner are described in the reference standards. After flame application, the visible area of fire damage must not exceed 2.5 m in height from the bottom of the burner.

The volume of tested material define a differentiation in categories:

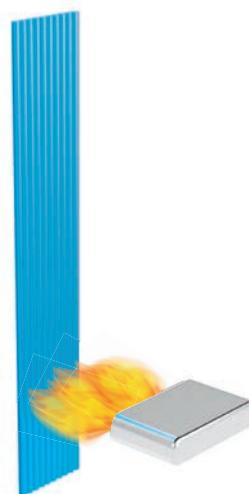

A F/R Part 3-21 7 l/m

A Part 3-22 7 l/m

B Part 3-23 3.5 l/m

C Part 3-24 1.5 l/m

D Part 3-25 0.5 l/m

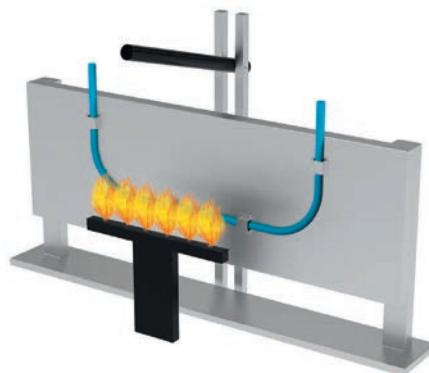

IEC 60331 / EN 50200: Fire test resistance

A sample of cable is horizontally applied supported by metal rings, or in U shape fixed on a fireproof wall.

Through using a gas burner the cable is maintained in flame contact for a certain time.

The test and the temperature of burner are described in the reference standards. In U shape test, the fireproof wall is hit every five minutes by a mechanical shock, to simulate a potential collapse during the fire.

The time of fire application, and the temperature of flame are described in the reference standards (typically 750°C or 830°C). The optical transmission of the fibers is checked and the change in attenuation is recorded during the test, and 15 minutes after flame extinction.

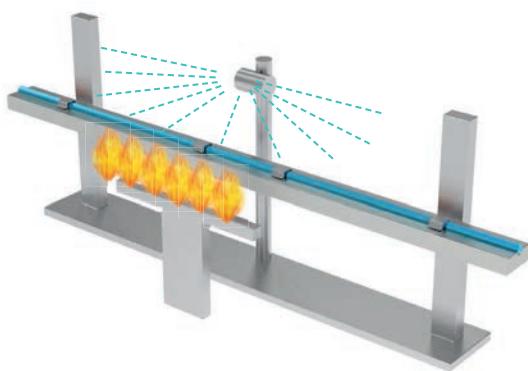

BS 6387 Category CWZ

The full test consists of subjecting the cable to 3 different protocols.

Protocol C: a flame with a temperature attack of 950°C is applied to the cable.

Protocol W: a flame with a temperature attack of 650°C is applied to the cable together with water simulating a sprinkler system.

Protocol Z: a flame with a temperature attack of 950°C is applied to the cable together with mechanical shock.

IEC 61034-1/2 - EN 50268-1/2: Measurement of smoke density of cables burning under defined conditions.

A few samples of cable are burnt in a cubic (3x3x3m³) chamber using a flammable liquid.

The light transmittance of the resulting smoke is measured using an optical light detector. The test duration is about 40 minutes, depending on the quantity and composition of the liquid fuel.

During the test the light transmittance of the smoke must be 60% minimum.

BS 8434-2 2003 + A2 2009: Fire resistance test

Test for unprotected small cables used in emergency circuits.

This British Standard specifies a method of test to be used for small unprotected cables where the requirements of BS EN 50200 are modified to use a flame temperature of 930 - 0 +40°C and the application of water spray.

The duration of the test shall be 120 min (60 min for the initial fire and impact phase followed by an additional 60 min for the fire, mechanical shock and water phase), during which the cable shall not reach the point of failure.

Conformity to this requirement shall qualify for a 120 min classification.

IEC 60754-1 - EN 50267-2-1: Test on gases evolved during combustion of materials from cables - Determination of the halogen acid gas content

This standard covers the general aspects of potential hazard caused from corrosiveness of smoke and combustion gases.

A small quantity of non-metallic material is heated in a tube, the resulting gases are tested for their halogen content. The flame

temperature is $800\text{ }^{\circ}\text{C} \pm 10\text{ }^{\circ}\text{C}$, with a test duration of 40 ± 5 min in total.

The halogen content of non-metallic materials must be less than 0.5% or 5 mg/g.

IEC 60754-2 - EN 50267-2-: Test on gases evolved during combustion of materials from cables - Determination of acidity (by pH measurement) and conductivity

A small quantity of non-metallic material is burnt in a furnace, the pH and conductivity combustion gases dissolved in water are measured.

The minimum pH value of the washing water must 4.3, and the maximum conductivity must be $10\text{ }\mu\text{S/mm}$.

► TK-EXTREME EDGE FIRE SAFETY CABLES

BS 8434-2 FIRE RESISTANT CABLES FOR USE IN EMERGENCY CIRCUITS

CABLE SPECIFICATIONS

| | |
|----------------------------|--|
| Conductor | Solid Class 1 or Stranded Class 2 Plain annealed copper in accordance with EN 60228 |
| Insulation | Fire barrier + Fire Resistant Silicone |
| Core identification | Brown-Blue (2 cores) Brown-Black-Grey (3 cores) Blue-Brown-Black-Grey (4 cores) |
| CPC | Stranded Tinned copper, same size of conductor |
| Shield | Aluminium/Polyester tape |
| Sheath | Low Smoke HFFR Thermoplastic material |
| Colour | Red, White or Black |

TECHNICAL DATA

| | |
|-------------------------------|----------------|
| Operating Voltage | 300/500 V |
| Test Voltage | 2000 V AC x 1' |
| Temperature range | -40°C ÷ + 90°C |
| Minimum bending radius | 6 x Ø |

TK-MTB FIRE BREAKOUT CABLES - LSZH

ON REQUEST

OPTICAL CORE

Fiber Structure

Tight Buffer 900 µm
Semitight Buffer 900 µm

White

Tight Colour Code

Strain relief

Sub unit Sheath

Numbered flame retardant,
low smoke and halogen-free material

Flame barrier

Aramid yarns

Assembling

Mica tape

Outer Sheath

4 to 24 sub units

Flame retardant, low smoke and halogen-free material

All cables are available with all type of fibers.

TECHNICAL DATA

Temperature range

-40°C to + 80°C

Installation temperature

-10°C to + 50°C

Minimum bending radius

Static: 10 x outer diameter

FIRE PERFORMANCE

Fire resistance

IEC 60331-25

Flame retardancy

IEC 60332-1-2

IEC 60332-3-24 Cat. C

Halogen-free

IEC 60754-1/2

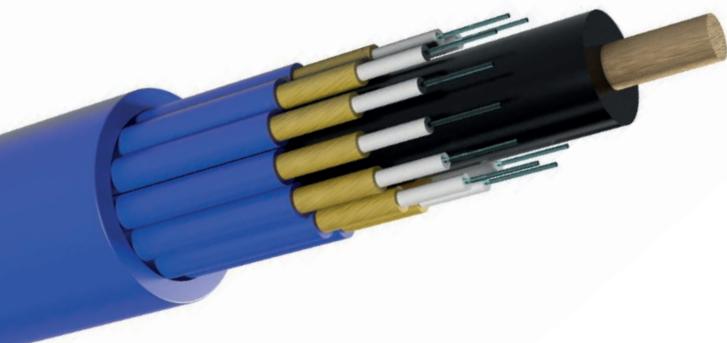

Low smoke density

IEC 61034-1/2

MAIN FEATURES

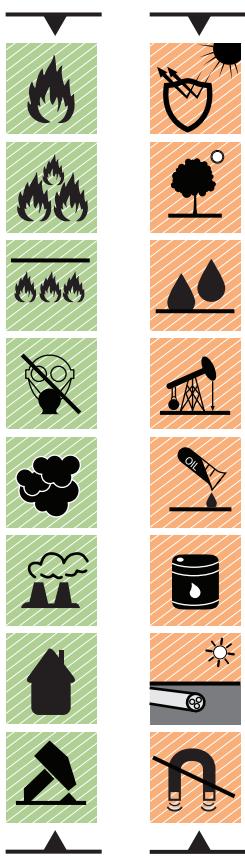

| No. of Fiber | Nominal Diameter (mm) | Nominal cable Weight (kg/km) | Max pulling Force (N) | Max Crush (N/dm) | Impact (J) |
|--------------|-----------------------|------------------------------|-----------------------|------------------|------------|
| 4 | 6.8 | 45 | 500 | 1000 | 10 |
| 6 | 8.0 | 60 | 1000 | 1000 | 10 |
| 8 | 9.8 | 90 | 1500 | 1000 | 10 |
| 12 | 12.6 | 165 | 2000 | 1000 | 10 |
| 16 | 12.0 | 150 | 3000 | 1000 | 10 |
| 24 | 15.0 | 210 | 4000 | 1000 | 10 |

Types mentioned here are standard. Different mechanical performance is available upon request.

TK-FIRE UTXD ARMoured UNITUBE DOUBLE SHEATH CABLES

MAIN FEATURES LSZH + GSWB + LSZH SHEATH

| No. of Fiber | Nominal diameter loose (mm) | Nominal diameter cable (mm) | Nominal cable Weight (kg/km) | Max pulling Force (N) | Max Crush (N/dm) | Impact (J) |
|--------------|-----------------------------|-----------------------------|------------------------------|-----------------------|------------------|------------|
| 2 to 12 | 2.8 | 8.6 | 100 | 1500 | 2500 | 10 |
| 13 to 24 | 3.5 | 10 | 130 | 1500 | 2500 | 10 |

MAIN FEATURES LSZH + CST + LSZH SHEATH

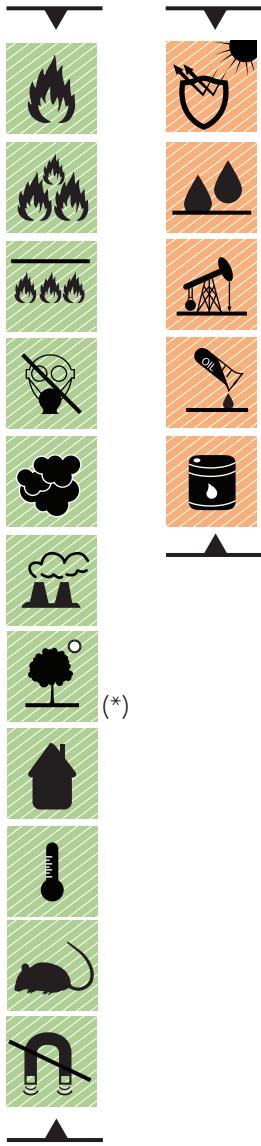

| No. of Fiber | Nominal diameter loose (mm) | Nominal diameter cable (mm) | Nominal cable Weight (kg/km) | Max pulling Force (N) | Max Crush (N/dm) | Impact (J) |
|--------------|-----------------------------|-----------------------------|------------------------------|-----------------------|------------------|------------|
| 2 to 12 | 2.8 | 10 | 125 | 2000 | 3000 | 15 |
| 13 to 24 | 3.5 | 10.5 | 145 | 2000 | 3000 | 15 |

Types mentioned here are standard. Different mechanical performance is available upon request.

TK-FIRE MTX MULTITUBE DIELECTRIC CABLES

ON REQUEST

OPTICAL CORE

| | |
|--------------------------|--|
| Fiber Structure | Jelly filled loose tube |
| Fiber Colour Code | See table A |
| Loose tube Colour | See table B |
| Flame barrier | Mica tape |
| Assembling | 6 to 24 loose tubes/fillers 12 to 288 fibers |
| Central element | fiber reinforced polymer |
| Protection | Aramid/Glass yarns |
| Outer Sheath | Flame retardant, low smoke and halogen-free or Cross-linked LSZH |

All cables are available with all type of fibers.

TECHNICAL DATA

| | |
|---------------------------------|-----------------------------|
| Temperature range | -40°C to + 80°C |
| Installation temperature | -10°C to + 50°C |
| Minimum bending radius | Static: 10 x outer diameter |

FIRE PERFORMANCE

| | |
|--------------------------|-----------------------|
| Fire resistance | IEC 60331-25 |
| Flame retardancy | IEC 60332-1-2 |
| | IEC 60332-3-24 Cat. C |
| Halogen-free | IEC 60754-1/2 |
| Low smoke density | IEC 61034-1/2 |

TK-FIRE API AIRBAG PROTECTION CABLES

ON REQUEST

OPTICAL CORE

| | |
|------------------------------|--|
| Fiber Structure | Jelly filled loose tube |
| Fiber Colour Code | See table A |
| Loose tube Colour | See table B |
| Flame barrier | Mica tape |
| Assembling | 8 loose tubes/fillers 16 to 96 fibers |
| Central element | Fiber reinforced polymer |
| Inner Sheath | Flame retardant, low smoke and halogen-free |
| Mechanical protection | Dielectric layer |
| Armouring | Anti rodent Glass protection |
| Outer Sheath | Flame retardant, low smoke and halogen-free or Cross-linked LSZH |

All cables are available with all type of fibers.

TECHNICAL DATA

| | |
|---------------------------------|-----------------------------|
| Temperature range | -40°C to + 80°C |
| Installation temperature | -10°C to + 50°C |
| Minimum bending radius | Static: 15 x outer diameter |

FIRE PERFORMANCE

| | |
|--------------------------|--|
| Fire resistance | IEC 60331-25 |
| Flame retardancy | IEC 60332-1-2 IEC 60332-3-24 Cat. C |
| Halogen-free | IEC 60754-1/2 |
| Low smoke density | IEC 61034-1/2 |

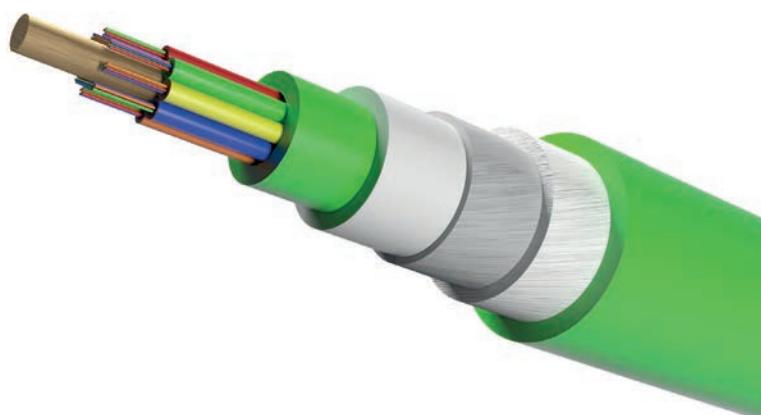

(*) for Cross-linked LSZH MUD

TK-FIRE API AIRBAG PROTECTION CABLES

MAIN FEATURES LSZH+AIRBAG+GLASS TAPE AND YARNS+LSZH SHEATH

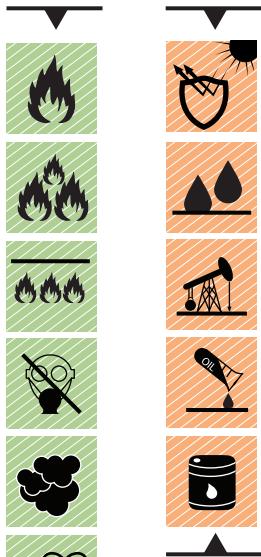

| No. of Fiber | Nominal Diameter loose (mm) | No. loose | No. filler | Nominal Diameter cable (mm) | Nominal cable Weight (kg/km) | Max pulling force (N) | Max crush (N/dm) | Impact (J) |
|--------------|-----------------------------|-----------|------------|-----------------------------|------------------------------|-----------------------|------------------|------------|
| 16 | 1.8 | 4 | 4 | 18 | 290 | 3000 | 10000 | 30 |
| 32 | 1.8 | 8 | 0 | 18 | 290 | 3000 | 10000 | 30 |
| 48 | 1.8 | 6 | 2 | 20 | 345 | 3000 | 10000 | 30 |
| 64 | 1.8 | 8 | 0 | 20 | 345 | 3000 | 10000 | 30 |
| 96 | 1.8 | 8 | 0 | 20 | 345 | 3000 | 10000 | 30 |

Types mentioned here are standard. Different mechanical performance is available upon request.

TK-MT6X FIRE ARMOURED MULTITUBE CABLES

ON REQUEST

OPTICAL CORE

| | |
|---------------------------------|--|
| Fiber Structure | Jelly filled loose tube |
| Fiber Colour Code | See table A |
| Loose tube Colour | See table B |
| Flame barrier | Mica tape |
| Assembling | 8 loose tubes/fillers 16 to 96 fibers |
| Central element | Fiber reinforced polymer |
| Inner Sheath | Flame retardant, low smoke and halogen-free |
| Strain Relief | Aramid yarns |
| Armouring | Welded and corrugated steel tape (H6) |
| Anticorrosion Protection | Bituminous/jelly layer |
| Outer Sheath | Flame retardant, low smoke and halogen-free or Cross-linked LSZH |

All cables are available with all type of fibers.

TECHNICAL DATA

| | |
|---------------------------------|-----------------------------|
| Temperature range | -40°C to + 80°C |
| Installation temperature | -10°C to + 50°C |
| Minimum bending radius | Static: 15 x outer diameter |

FIRE PERFORMANCE

| | |
|--------------------------|-----------------------|
| Fire resistance | IEC 60331-25 |
| Flame retardancy | IEC 60332-1-2 |
| | IEC 60332-3-24 Cat. C |
| Halogen-free | IEC 60754-1/2 |
| Low smoke density | IEC 61034-1/2 |

TK-MTAS FIRE MULTITUBE ADSS CABLES

ON REQUEST

OPTICAL CORE

| | |
|---------------------------------|--|
| Fiber Structure | Jelly filled loose tube |
| Fiber Colour Code | See table A |
| Loose tube Colour | See table B |
| Flame barrier | Mica tape |
| Assembling | 6 to 24 loose tubes/fillers 12 to 288 fibers |
| Central element | Fiber reinforced polymer |
| Inner Sheath | Flame retardant, low smoke and halogen-free |
| *Antibalistic protection | Aramid tapes or glass flats |
| Strain Relief | Aramid yarns |
| Outer Sheath | Flame retardant, low smoke and halogen-free or Cross-linked LSZH |

All cables are available with all type of fibers.

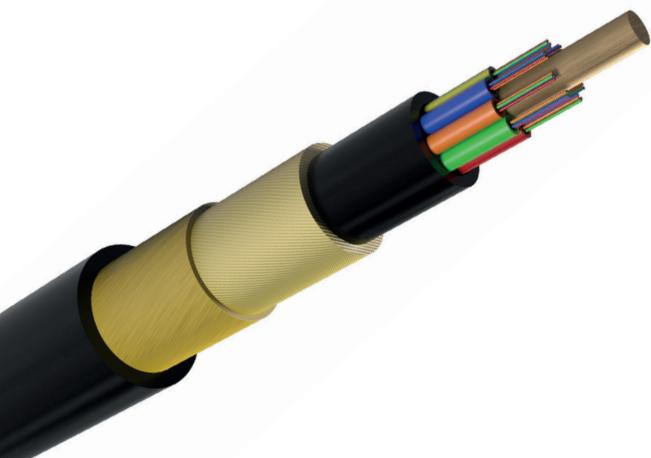

TECHNICAL DATA

| | |
|---------------------------------|-----------------------------|
| Temperature range | -40°C to + 80°C |
| Installation temperature | -10°C to + 50°C |
| Minimum bending radius | Static: 10 x outer diameter |

FIRE PERFORMANCE

| | |
|--------------------------|-----------------------|
| Fire resistance | IEC 60331-25 |
| Flame retardancy | IEC 60332-1-2 |
| Halogen-free | IEC 60332-3-24 Cat. C |
| Low smoke density | IEC 60754-1/2 |
